LIGHTING INNOVATOR

Since 1979, DIETAL is specialized in the **development and production of professional fluorescent and LED lighting solutions.**

With nearly 500 employees, the company is market leader in France and, with 50% of its turnover abroad, very active in the international business. Today the company counts **more than 120 customers in 50 countries.**

DIETAL delivers approximately **1 million lighting fixtures per year** for the best-known lighting specialists, catalogue articles as well as custom-made products.

Thus DIETAL offers its clients competitive and up to date solutions in **lighting design and technologies**, combined with the flexibility and reliability of a midsize, owner-managed company.

## COMPANY PROFILE

---

## PRODUCT EXPERTISE

---

DIETAL provides a comprehensive range of indoor lighting solutions, suitable for many applications such as office, education, healthcare, retail, industry, harsh environments, etc.

Our “know-how” extends from traditional lighting fixtures to custom lighting solutions designed according to clients’ specifications.

DESIGNED IN FRANCE-MANUFACTURED IN EUROPE

---

All our products are designed and developed by a highly-experienced team of specialists, and manufactured in Europe on both production sites, in France and Romania.

From the supply of raw materials to the shipment of the luminaires, every step of the production process (metal works, lacquering, wiring, assembly) is thus managed in-house.

## INNOVATION & RESPONSIBILITY

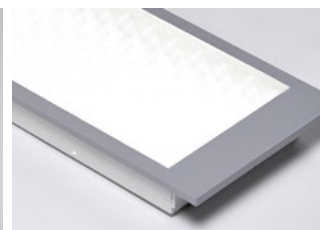

Armed with strong experience in fluorescent lighting, we started from 2010 focusing investments on the development and integration of LED technology, while continuing efforts in the improvement of our products and global process.

Through this approach, we commit to develop reliable products (100% of the products are controlled before shipment) and guide our customers towards efficient, eco-friendly lighting solutions and respectful of users' well-being.

## CUSTOM LIGHTING SOLUTIONS

Our service of custom lighting solutions has been set up and developed with the growing demand from our clients for “exclusive” luminaires. We are thus able to adapt or create new and unique lighting solutions that meet conventional or unconventional specifications, while still complying with DIETAL's quality standards.

## REFERENCE PROJECTS

### ADNOC HEADQUARTERS, UNITED ARAB EMIRATES

Established in 1971, Abu Dhabi National Oil Company (ADNOC) is one of the world's leading companies in oil and gas industry.

Overhanging the Arabian Gulf, the tower housing the new headquarters (342 meters high – 76 floors – 175,300 sqm of total office area) symbolizes the company's importance in the development of the United Arab Emirates.

In order to meet LEED environmental certification requirements (Leadership in Energy and Environmental Executive), DIETAL designed and manufactured 25,000 custom-made LED luminaires offering the best compromise between performance and architectural integration.

### APPLE® OPERATIONS CENTER, SINGAPORE

Early 2016, DIETAL was entrusted with the renovation project of Apple® Operations Center, in Singapore.

In order to equip offices and R&D laboratories located within the Solaris Fusionopolis business park, DIETAL had to design a lighting solution "made to measure" within 2 weeks, and deliver within 1 month more than 2,500 linear meters of recessed LED profile luminaires. Thus meeting the criteria of aesthetic and performance requirements from the US electronics giant.

### WARNER BROS® THEME PARK, UNITED ARAB EMIRATES

The construction of the Warner Bros® theme park on Yas Island in Abu Dhabi started in 2016. For the first time, the American entertainment company plans to include one-of-a-kind Warner Bros® branded hotel alongside the immersive park. It is said that the project would create more than 1,000 new jobs in Abu Dhabi, and would increase visitor numbers to Yas Island from 25 to 30 million at the opening in 2018.

As part of it, DIETAL was chosen to provide more than 3,500 waterproof LED luminaires, offering a fast return on investment due to eco-design and latest LED performance.
